

PRACTICE TASKS DAY 7

Question 1: Linked List

Write a function to reverse the specified portion of the given linked list.

For instance:

Input:

Linked List: $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 5 \rightarrow 6 \rightarrow 7$

Start position = 2

End position = 5

Output:

$1 \rightarrow 5 \rightarrow 4 \rightarrow 3 \rightarrow 2 \rightarrow 6 \rightarrow 7$

Question 2:

Write a C++ class to implement a stack using a dynamic array that can automatically resize itself when new elements are added or removed. In addition, it should provide a function to reverse the stack items in linear time complexity using the same stack class implementation.

E.g.

Stack items: A,B,C,D

Reverse items: D,C,B,A

Note: You only need to provide functions for the above operations, not all stack operations
