

Day 5

Monday

1. Matrix Spiral Traversal

You are given a 2D matrix of size $N \times M$. Print all the elements in spiral order (clockwise, starting from the top-left corner).

Example Input:

Dimensions of Matrix: 3 3

1 2 3

4 5 6

7 8 9

Expected Output:

1 2 3 6 9 8 7 4 5

2. Leader in an Array

A “leader” in an array is an element that is greater than all the elements to its right. Write a program to find all leaders in the array.

Hints:

- Start from the rightmost element (it’s always a leader).
- Keep track of the maximum seen so far.
- Move leftwards and compare each element with the maximum.

Example Input:

16 17 4 3 5 2

Example Output:

17 5 2

Explanation:

- 17 is greater than everything to its right.
- 5 is greater than 2.
- 2 is the last element, so it's a leader.
